INTRODUCTION

The goal of the Online Restaurant Reservation System is to create a innovative web application that enhances the dining experience for clients and restaurant employees equally. Visitors will be able to easily view actual table availability and make online reservations due to an intuitive interface. Customers will then receive emails confirming their reservations right away. This system seeks to improve customer satisfaction and the overall operation of the restaurant in addition to simplifying the reservation process and facilitating staff operations.

OBJECTIVES

- Create a website with a reservation system for restaurant clients to book ahead of time.
- Create a simplified presentation of available tables in the restaurant for the desired time slots.
- Automate email alerts for reservation confirmations based on user information from the website.
- The managed platform can be implemented to improve the restaurant's overall image, client satisfaction, and operational efficiency.

PROTOTYPE'S DEMO

[https://www.figma.com/design/ZUEKJKldwLoeGJL9Lnq6Sg/
Project3?t=CPbIoq9yA4bBb4tu-1](https://www.figma.com/design/ZUEKJKldwLoeGJL9Lnq6Sg/Project3?t=CPbIoq9yA4bBb4tu-1)

SUMMARY & CONCLUSION

- ▶ Determined the flaws and limitations off current existing system's features
- ▶ Constructed necessary processes and workflows.
- ▶ Implemented design in prototype.
- ▶ Created suitable prototype based on improvements and feedback.

The End
THANK YOU!
